XL Breast Augmentation

Extra Large Breast Implants from 600cc to 2,000cc

Due to popular demand, this page features some of Dr. Revis' larger breast augmentations, in the 600-2,000cc range. Shown are both clinical and candid photos of some of our many happy patients.

Currently, the largest silicone gel implant available in the United States is 800cc. On this page, you will see saline and silicone augmentations up to 800cc. Above 800cc, all of the augmentations are saline.

There are some special techniques required for placing large breast implants, and experience is the key in preventing complications. When replacing old implants with new larger implants, Dr. Revis will often apply the Internal Bra technique — his strong, permanent internal suturing technique that provides excellent long-term support for your breast implants.
