INDICATION: Right breast tenderness.

PROCEDURE: Ultrasound evaluation of the periareolar region has been performed bilaterally and is submitted for assessment dated 03/24/2011. The left has been performed for comparison.

FINDINGS: The current examination demonstrates normal retroareolar shadows. I do not appreciate any evidence of focal lesion. There are no masses or cysts.

IMPRESSION: NEGATIVE RIGHT BREAST ULTRASOUND. THERE ARE NO FINDINGS OF SUSPICION FOR MALIGNANCY.

ASSESSMENT: 1, Negative.

The American Cancer Society and the American College of Radiology recommend annual screening mammography beginning at age 40.
