(A) *****Because ethnic data is not always readily available, this report includes an eGFR for both African-Americans and non-African Americans.*****

The National Kidney Disease Education Program (NKDEP) does not endorse the use of the MDRD equation for patients that are not between the ages of 18 and 70, are pregnant, have extremes of body size, muscle mass, or nutritional status, or are non-Caucasian or non-African American.

According to the National Kidney Foundation, irrespective of diagnosis, the stage of the disease is based on the level of kidney function:

Stage	Description	GFR(mL/min/1.73 m ²)
1	Kidney damage with normal or decreased GFR	90
2	Kidney damage with mild decrease in GFR	60-89
3	Moderate decrease in GFR	30-59
4	Severe decrease in GFR	15-29
5	Kidney failure	<15 (or dialysis)
