FINDINGS: There is prominent soft tissue swelling and possible hematoma present adjacent to the horizontal and ascending rami of the mandible on the right side. There is soft tissue swelling anterior to the maxilla, nasal bones and frontal sinus.

The walls of the orbits and maxillary sinuses appear intact. The zygomatic arches appear intact. Evaluation of the mandible is limited due to motion artifact although no fracture is seen. There is no evidence for temporomandibular joint dislocation.

There is a comminuted slightly displaced fracture of the left nasal bone. There is moderate to severe S-shaped deviation of the nasal septum which is convex toward the right along the inner portion and toward the left along the posterior portion. The pterygoid plates appear intact.

The paranasal sinuses and mastoid air cells appear clear.

IMPRESSION:

1. SOFT TISSUE SWELLING AS DESCRIBED.
2. COMMUNUTED SLIGHTLY DISPLACED FRACTURE OF THE LEFT NASAL BONE.
3. EVALUATION OF THE MANDIBLE IS LIMITED BY MOTION ARTIFACT, NO FRACTURE IS SEEN.
