

Progress Note

Patient: BLAYK, BONZE ANNE ROSE
DOB/Age: 05/01/1956 62
Admission Date: 09/24/18

Account Number: A00088571823
Medical Record#: M000597460

Provider: Clifford Ehmke MD

Subjective

- Subjective

Date of Service: 10/08/18

Service Type: 99231 Hosp care 15 min low complexity

Subjective:

Anne Rose has been reluctantly taking oral paliperidone over the weekend in an attempt to stave off the judge's order for Invega Sustenna, which is included in the T.O.O. list and medically indicated for her treatment. I have let her know that this medication is essential for her health and discharge status and that she cannot refuse per Judge Miller's order. Anne Rose responds by becoming agitated and paranoid, questioning the legal validity of the judge's order, as well as the medical credentials of the treatment team members. She comes out of her room to accuse me in front of staff members of being "a psychopath." She does seem much more social, however, going to groups and ambulating without evidence of discomfort on the unit.

Objective

- Appearance

Appearance: Well Developed/Nourished

Dysmorphic Features: No

Hygiene: Normal

Grooming: Fairly Well Kept

- Behavior

Psychomotor Activities: Normal

Exhibits Abnormal Movement: No

- Attitude and Relatedness

Attitude and Relatedness: Hostile

Eye Contact: Poor

- Speech

Quality: Pressured

Latencies: Short

Quantity: Terse

This report is only to be considered final once signed by the Provider(s) as displayed in the "<Electronically Signed by >" field (s). Absence of a signature indicates the report is in a draft status and still needs to be finalized. In the event this document was created by someone other than the signing Provider, the individual initiating the document will be listed in the "Entered by:" or "Dictated by:" fields.

- Mood

Patient's Description of Mood: "Terrible"

- Affect

Observed Affect: Tense

Affect Consistent with: Dysphoria

- Thought Process

Patient's Thought Process: Circumstantial

Thought Content: Yes Paranoid Ideation, No Passive Death Wish, No Suicidal Planning, No Homicidal Ideation

- Sensorium

Experiencing Hallucinations: No, Sensorium is Clear

Type of Hallucinations: Visual: No, Auditory: No, Command: No

- Level of Consciousness

Level of Consciousness: Agitated

Orientation: Yes Intact, Yes Orientated to Time, Yes Orientated to Place, Yes Orientated to Person

- Impulse Control

Impulse Control: Poor

- Insight and Judgement

Insight and Judgement: Impaired

- Group Participation

Participating in Group Activities: Yes

- Medication Management

Medication Management Adherence: Partial

Assessment

- Assessment

Merits Inpatient Hospitalization: For Immediate Safety, For Stabilization

Inpatient DSM-V Dx: F29

Clinical Impression:

62 y.o. single, white, male to female transgendered patient with a history of chronic psychotic and personality disorders, who is transferred from the Hospitalist service following an altercation with law enforcement at a local Denny's restaurant in which she was struck in the face, resulting in nasal fracture, elevated WBCs and elevated CPK. The patient was agitated and combative in the ER, requiring stat administration of IM lorazepam, ziprasidone and ketamine, as well as mechanical restraint for patient's and others' safety. She since required involuntary surgery to reduce a separated left shoulder, after refusing this. On exam she is delusional, angry and hostile.
