- Impulse Control

Impulse Control: Tenuous

- Insight and Judgement

Insight and Judgement: Fair

- Group Participation

Participating in Group Activities: No

- Medication Management

Medication Management Adherence: No

Assessment

- Assessment

Merits Inpatient Hospitalization: For Immediate Safety, For Stabilization

Inpatient DSM-V Dx: F29

Clinical Impression:

62 y.o. single, white, male to female transgendered patient with a history of chronic psychotic and personality disorders, who is transferred from the Hospitalist service following an altercation with law enforcement at a local Denny's restaurant in which she was struck in the face, resulting in nasal fracture, elevated WBCs and elevated CPK. The patient was agitated and combative in the ER, requiring stat administration of IM lorazepam, ziprasidone and ketamine, as well as mechanical restraint for patient's and others' safety. She since required involuntary surgery to reduce a separated left shoulder, after refusing this. On exam she is delusional, angry and hostile.

Plan
